

When engineering said,  
“ACI’s new unloader  
would *increase revenue.*”  
I said, “Show me.”

We’d like to show you how our new COPAC<sup>\*</sup> unloader can squeeze more revenue out of your compression system.

ACI’s latest innovation, an automatic variable volume front-end unloader adapts instantly to system changes to create the exact volume needed to maximize efficiency. Not only does the COPAC reduce costs and increase revenue, it can also help you meet or exceed strict air quality regulations. The COPAC can maintain a fixed load for maximum driver efficiency or it can provide maximum torque at a fixed suction pressure.

We’d like to show you more. We’re ACI Services, the compression experts. Our engineering and field services help end-users get the most out of their compression equipment in production and process operations. We also design and manufacture performance software and other hardware products such as cylinders, pistons, rods and liners.

Put our expertise to the test. Call us to discuss your toughest compression problems. Our solutions can go *beyond* paying for themselves—we can help you *increase* your profits.

\*COPAC is a registered trademark of Cooper Energy Services and is manufactured under license by ACI Services, Inc.
