

ARIEL

Process Compressors

A PICTURE OF STABILITY

The ability to balance a nickel on an operating compressor demonstrates the solid engineering behind every Ariel. Driver-rated shaft speeds, combined with the slow piston speeds traditional in the process industry, produce a system of unrivaled stability, longevity and economy.

An Ariel is Like Money in the Bank

By helping end-users earn more, Ariel has become the largest reciprocating compressor supplier in the production, storage and transportation industries. Ariel has earned this position through high on-line reliability, 48-hour parts shipment, unparalleled technical assistance and continuous technical innovation. Ariel ships more than two million horsepower per year.

Ariel compressors are now available in process configurations for the refinery, petrochemical, chemical and industrial gas industries. Ariel process compressors are available in both lubricated and nonlubricated configurations for a variety of gases including hydrogen, nitrogen and ethylene.

Let us demonstrate our equipment and support on your next process application. Call Ariel or one of our Regional Sales Managers listed on our Web site for more information.
