

# The Only Rotary Compressor Designed for Gas Gathering

Until now, modified air and refrigeration compressors have been the only option for natural gas applications. Now, Ariel, the leader in gas compression, has designed—from the ground up—a rotary screw compressor specifically for gas gathering.

Ariel's RG282 rotary compressor provides a wide, efficient operating range because it can adapt to changing conditions. The internal compression ratio and inlet flow are continuously adjustable—even while the unit is running.

The RG282 is built to last and is backed by the best warranty in the business, exceptional field service, and our commitment to ship standard replacement parts within 24 hours. Find complete details by visiting our website.
